

How does DSRAZOR help with Regulatory Compliance Auditing?

Regulatory compliance auditing requires gathering of security related data from your directory and file systems. Use DSRAZOR by Visual Click Software to quickly, easily and accurately create custom reports your auditors and management require.

Reports provided by DSRAZOR for Windows and DSRAZOR for eDirectory include:

- ✓ File System Security – Including all permissions by file system object
- ✓ File System Security – Including all permissions by trustee
- ✓ File System Security – Including all objects with permission inheritance blocked
- ✓ Active Directory Security – Including all permissions by active directory object
- ✓ Active Directory Security – Including all permissions by trustee
- ✓ Identify Specific User Privileges – Including Administrative, Dial-In, Send-As, Allowed-To-Authenticate and so on
- ✓ File System Object Ownership
- ✓ Active Directory Object Ownership
- ✓ Group Membership – including nest groups
- ✓ Unused User and Computer Accounts
- ✓ Objects with a NULL ACL (everyone has access when the ACL is NULL)
- ✓ Group Policy Objects – including where they are defined and status

Each of these reports can be exported to a flat file (CSV format) for processing by your auditors. DSRAZOR gathers these data in an automated fashion that saves time and reduces errors incurred by using native tools that require time-consuming manual intervention.

DSRAZOR features a patented visual scripting module that gives you the power to visually create the exact reports you require for regulatory compliance auditing. Try DSRAZOR today.
