

# DSRAZOR Solution: Active Directory Raw Attribute Viewer

Every object in Active Directory contains attributes. Each attribute has one or more values. DSRAZOR for Windows helps you investigate these attributes. Quickly reveal objects, attributes and attribute values with DSRAZOR's Raw Viewer. The Raw Viewer is an applet included in DSRAZOR's Console (`rawad2.dsr`). You can use it as is or it can easily be customized to help you when you need to take a deeper look into Active Directory.

The following image shows the Raw Viewer in action:

You can print any values shown, you can also export values to a flat file (CSV format). The Raw Viewer helps you determine what is stored in your Active Directory. The view above reveals the attributes defined for the *Windows Authorization Access Group* object, a few of the attributes have been opened to show the value(s).

Use DSRAZOR's Raw Viewer to access and document data stored within your Active Directory today!
