Visual Click Software released DSRAZOR for Windows, a Windows and Active Directory (AD) security assessment and management solution. DSRAZOR is Visual Click's first product for the Windows platform. Visual Click previously served the Novell market but discovered a need for DSRAZOR in the Windows realm. Jonathan Gallagher, senior marketing analyst for Visual Click, says, "After reviewing our sales analysis, we saw the majority of our customers moving from the Novell market to the Windows market. Our customers asked for DSRAZOR for Windows and so we gave them what they wanted."

DSRAZOR features a Designer tool that comes with more than 70 applets that perform various Windows- and AD-management tasks. With DSRAZOR, you can identify your AD objects and attributes and generate discretionary ACL (DACL) trustee reports. You can also generate reports for Windows file system objects such as domain controllers (DCs), servers, and user workstations. "Each applet in the Designer can be customized to suit your needs" says Ken Aldrich, sales engineer for Visual Click. "The Designer gives you the building blocks for making your own applets, requiring no scripting or programming." Ken adds, "if there is an applet that you want altered or created to perform a certain duty, you can call or email us and we'll take care of it for you. We also provide online Web-training sessions so you can learn the steps of how we create the applet."

DSRAZOR sets itself apart with great flexibility and service. Ryan Fox, product marketing manager for Visual Click, says, "Whether you buy our product or download a trial, we offer full support with free upgrades, free software training, and free customized solutions."
